

HOW TO USE

# Alina's Study Desk

A simple guide to tracking tuition, syllabus and study  
on the way to SSC 2027

[alina-study-tracker.vercel.app](https://alina-study-tracker.vercel.app)

# Start here

1

Three things to do once. After that the app takes about two minutes a day.

1

## Open it on your phone

Go to **alina-study-tracker.vercel.app** in Chrome. Tap the browser menu and choose “**Add to Home screen**”. Now it opens like a normal app, with its own icon.

2

## Add your teachers

Open **Teachers** → **Add**. Put in each tutor and coaching centre, choose **Tutor** or **Coaching, Online** or **Offline**, and tap the subjects they teach. Add the monthly fee if you want to track payments.

3

## Add your class times

Open **Schedule** → **Add slot**. Pick the day and time for each regular class. Do this once and your week is set.

**When a teacher changes — and they will.** Do not delete them. Open the teacher and tap “**Stopped studying**”. Their old classes, notes and fees stay in your history, and their class times switch off automatically. If they come back later, tap **Resume**.

# Every day

2

Open the **Today** page. Everything you need for the day is on this one screen.

SSC EXAMINATION

**149** days left

About 21 weeks to go

STUDIED

**1h 15m**

STREAK

**4 days**

CLASSES

**2**

ROUTINE

**3/4**

## Do these four things

- 1 **Tick your routine.** Small daily habits — morning revision, homework, sleep by 11.
- 2 **Log each class.** Tap **Log** next to a class and write what was actually covered, plus any homework given.
- 3 **Run the study timer** when you sit down to study. Pick the subject first — this is what makes the Insights page work.
- 4 **Check the topic strip** — three days back, today, three days ahead.

**Homework writes itself.** Anything you type into the “Homework given” box when logging a class appears automatically on the **Homework** page. You never enter it twice.

## What to write when you log a class

### STATUS

Did it actually happen? **Held**, **Cancelled**, **I missed it** or **Rescheduled**. Be truthful — this is what tells you later whether a teacher is reliable.

### WHAT WAS COVERED

One line is enough. *“Finished Newton’s 2nd law, did 6 problems from ch.3.”* Next week this is how you remember where you actually got to.

### HOW WELL DID YOU FOLLOW?

A 1–5 tap. If a teacher keeps scoring 2s, that is worth noticing early rather than in December.

# The 0–5 scale

3

This is the heart of the app. Open **Syllabus**, tap a subject, and give every chapter an honest number.

0

Never started this chapter

1

Just know what is in the chapter

2

Know some parts of it

3

Knew it, but needs a revision

4

Can solve 70–80% of CQ, MCQ and SQ

5

Can solve everything

**Be honest, not generous.** The whole point is to find the weak chapters while there is still time to fix them. A syllabus full of 5s that isn't true helps nobody in January.

## What you get back

### A bar for every chapter

Tall bars are strong chapters. The short ones show exactly where the gaps sit along the book.

### A percentage per subject

Physics

41%

100% means every chapter is at level 5. Each subject is scored on its own — there is no single overall number, because the useful question is always *which subject is weak?*

**Not sure which number to pick?** Ask yourself one question: “*Could I solve a CQ from this chapter right now, with the book closed?*” A confident yes is **5**. Yes but slowly is **4**. “I knew this last month” is **3**. Anything vaguer is **2** or below.

**Re-rate honestly, not just upward.** If a chapter has slipped, move it back down. The app tracks every change, so a chapter that drops from 4 to 3 shows up in your revision list instead of quietly rotting at the wrong number.

# Every week

4

## Update your chapter levels

Sunday evening is a good time. Move anything you studied this week up a level. This takes two minutes and is what powers the whole Insights page.

## Fill in the Class plan

At the start of each month, ask every teacher: *"What will we cover this month?"* Write it on the **Class plan** page. Tick topics off as they actually happen.

Anything not finished can be pushed into next month with one tap, so nothing quietly disappears.

## Read the Insights page

Once there is a week of history it starts answering real questions:

- **Will you finish in time?** Your actual pace against the days left.
- **Weakest chapters** — everything sitting at 0, 1 or 2.
- **Due a revision** — strong chapters you haven't touched in a month.
- **Where your time goes vs. where it is needed** — catches you spending hours on a subject that is already strong while a weak one sits untouched.
- **Are your teachers delivering?** — how often classes actually ran, and whether they covered what they promised.

# Every page, briefly

5

| PAGE                       | WHAT IT IS FOR                                                                    |
|----------------------------|-----------------------------------------------------------------------------------|
| <b>Today</b>               | Your day at a glance: countdown, classes, routine, homework, and the topic strip. |
| <b>Calendar</b>            | Plan what to study on a day, then come back and record what was actually covered. |
| <b>Teachers</b>            | Every tutor and coaching centre, their subjects, fees and contact.                |
| <b>Schedule</b>            | Your regular weekly class times, Saturday to Friday.                              |
| <b>Class plan</b>          | What each teacher will cover this month, and the next two weeks of classes.       |
| <b>Syllabus</b>            | Every chapter, rated 0–5, with a progress graph per subject.                      |
| <b>Insights</b>            | What your data says: pace, weak spots, revision due, where your time goes.        |
| <b>Homework</b>            | Tasks grouped by overdue, today, tomorrow and later.                              |
| <b>Exams</b>               | Upcoming exams and their paper-by-paper routine, with a countdown.                |
| <b>Study timer</b>         | A stopwatch for self-study. Always pick the subject first.                        |
| <b>Routine &amp; goals</b> | Daily habits and bigger targets you are working towards.                          |
| <b>Fees</b>                | What is owed each month, next to how many classes actually happened.              |
| <b>Settings</b>            | Subjects, exam date, study goal, theme, cloud sync and backup.                    |

On a phone the bar at the bottom holds **Today**, **Calendar**, **Syllabus**, **Insights** and **Study timer**. Everything else is under **More**.

# Keeping your data safe

6

## Using two devices

In **Settings** → **Cloud sync**, turn sync on. You get a long **sync code**.

On your other device, open the same site, go to Settings, and paste that code under “*use an existing code*”. Both devices now share one set of data.

**The sync code is your password.** Anyone who has it can read and change everything. Never put it in a screenshot or send it to anyone.

## Backups

Sync is convenience, not a backup — a mistake copies itself to every device within seconds.

Once every few weeks: **Settings** → **Export backup**. It saves a small file. That file is the only thing that survives clearing your browser or a bad edit.

To restore, use **Import backup** and pick the file.

## If something looks wrong

| WHAT YOU SEE                  | WHAT TO DO                                                                    |
|-------------------------------|-------------------------------------------------------------------------------|
| A subject has no teacher      | Today page warns you. Either find a tutor or plan self-study for it.          |
| “Still measuring” on Insights | Normal. It needs about a week of chapter ratings before it will quote a pace. |
| Study time shows no subject   | You used the timer without picking a subject. Pick one next time.             |
| “Sync failed”                 | Check your internet. Your data is still safe in the browser either way.       |

# The short version

7

If you remember nothing else, remember this page.

## EVERY DAY

- Tick your routine
- Log each class — what was covered, what homework
- Run the timer, **with the subject selected**

## EVERY WEEK

- Update chapter levels on **Syllabus**
- Read **Insights**
- Clear anything in **Due a revision**

## EVERY MONTH

- Ask teachers what they will cover, write it in **Class plan**
- Mark fees paid
- **Export a backup**

## The 0–5 scale, again

- 0 Never started this chapter
- 1 Just know what is in the chapter
- 2 Know some parts of it
- 3 Knew it, but needs a revision
- 4 Can solve 70–80% of CQ, MCQ and SQ
- 5 Can solve everything

Two minutes a day beats a panic in December.

**Good luck, Alina.**
